

IP Office Desktop Communications Solutions

PC-Based Tools for Communications

Overview

Avaya IP Office desktop communications applications provide visual and point-and-click access to call functions. Desktop communications applications available with IP Office include SoftConsole, Phone Manager and Phone Manager PC Softphone.

Capabilities

SoftConsole — SoftConsole is the PC-based operator console that provides a visible display of call information and PC-based call handling — offering call control of the operator’s telephone. SoftConsole enables phone operators (receptionists) to answer, route and manage incoming calls from the screen of their PCs. It also provides login options for back-up operator PCs. SoftConsole users can simultaneously view caller information, directory information (for point-and-click routing), held calls and company-wide phone status. SoftConsole users can also view their call history including missed calls.

Phone Manager — The Phone Manager application offers control of the telephone from the user’s PC. Phone Manager is available in three versions: Phone Manager Lite, Phone Manager Pro and Phone Manager PC Softphone (VoIP mode).

Phone Manager Lite is a free IP Office application that allows all employees visual access to features and capabilities, including hosting conference calls. Phone Manager Lite works with affordable analog and entry-level digital or IP phones — while still offering advanced telephone functionality via a networked desktop PC.

Phone Manager Pro builds upon Phone Manager Lite by offering additional features, including integration with contact management packages for screen popping, voicemail control with VoiceMail Pro, and personal phone number directory. With built-in Telecommuter mode, remote workers have the benefits of call control, speed dial, call history and more while using the talk path through an external number — such as home number or mobile number.

Phone Manager PC Softphone offers the same GUI interface as Phone Manager Pro. The difference is that no phone terminal is needed — conversation actually takes place via the user’s PC. (The physical setup must include a headset/microphone connected to the PC’s soundcard or USB port.) Phone Manager PC Softphone offers a significant advantage for mobile users with remote access to the LAN — who can use a “phone within their laptop” with all the features that are available in the office.

Primary Benefits

- Simplifies communications — point-and-click access to commonly used features
- Enhances productivity
- Supports more effective call handling — increasing customer satisfaction
- Saves money — by combining Phone Manager applications with entry-level phones
- PC Softphone supports mobile, traveling workers; lowers long distance costs; makes it easier for travelers to stay in touch with co-workers and customers
